(54) METHOD AND SYSTEM FOR DEALING WITH INTERNET TERMINAL OF EXISTENT ONLINE APPLICATION, SERVER DEVICE AND RECORDING MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To function a client application as an Internet application using a Web browser terminal without altering the host application of an existent online application.

SOLUTION: This system is provided with a Web server 143 having a repetition service call contents 147 for calling a repetition service means by receiving a connection request from the Web browser of the terminal and a repetition service 110 which receives information from the host application, dynamically shapes the information into form displayable for the Web browser and transmits it to a Web browser 151 later. When the connection request from the Web application is received in the state of no synchronization of the pictures of the connection request from the Web browser and the picture of the transiting state of the present host application, a suitable picture managed by a synchronizing control means 135 is forcibly re-sent to the Web browser without initializing the job of the host application so that a synchronized normal state can be recovered.
